## Three-D desk **BRAND STORY**

### **The first patent for angle adjustable desks**

Why are desks we use to work and study on so uncomfortable?

The beginning of Three-D desk starts 32 years ago in 1989. Back in the days when functional desks were unheard of, developer CEO Kim SungYoon patented the world's first angle adjustable and multifunctional desk and obtained the basic technology behind the current Three-D desk. Feeling that simply being angle adjustable wasn't enough for the science behind a perfect desk, he continued researching to develop more innovative technologies for desks. During this time, a German furniture company commercialized and revealed their angle adjustable desk in 2003 at Paris Exhibition and afterwards angle adjustable chairs appeared in Taiwan, Japan and Korea.

### **Ergonomic desk that prevents forward head posture**

Humankind's first ever living desk. Launched in 2015, world-class premium workstation brand Three-D desk is a brand specializing in ergonomic desks.

Three-D Desk is a three-dimensional desk consisting of an inclined zone and vertical zone and allowing your book and monitor to be at eye-level, it is structurally engineered to prevent slouched posture. It is the only desk in the world that prevents chronic posture problems of modern people such as forward head posture. Containing Three-D desk's unique innovative technology that links the inclined zone and vertical zone with a touch of a button, the level of the book or monitor can be adjusted to the convenience of the user to match his frequently changing eye-level and posture. This significantly reduces stress on your body caused by hours of bad posture and in turn, improves your work performance and quality of life.

### **Leading smart furniture at CES**

Unprecedented for a furniture company, Three-D desk has participated in the U.S. Las Vegas CES for many years since 2018, playing a global leading role in the smart/IT furniture area, enhancing Korea's technology and status.

### **A new world of work environment**

A desk system you've only dreamed of optimized for human structure and motion characteristics. Three-D desk offers a new paradigm for desks and changes the work environment. It's so comfortable that you can't feel the time passing by. Money can't buy you a new body, so don't ruin it. This is an era where desks adjust to your body. Three-D desk invites you to a new world of work environment!

# CONTENTS

Three-D desk's product line-up are categorized into the following

## Professional

Triple Smart Workstation model for doctors, lawyers, engineers, stock investors, developers, artists, editors, and Youtubers.

## Business

Dual Workstation model for at-home work, non-face-to-face work, and general office work.

## Study

Ergonomic smart desk with no monitors for children, students, and adults who sit for long hours to read and study.

## Other office furniture

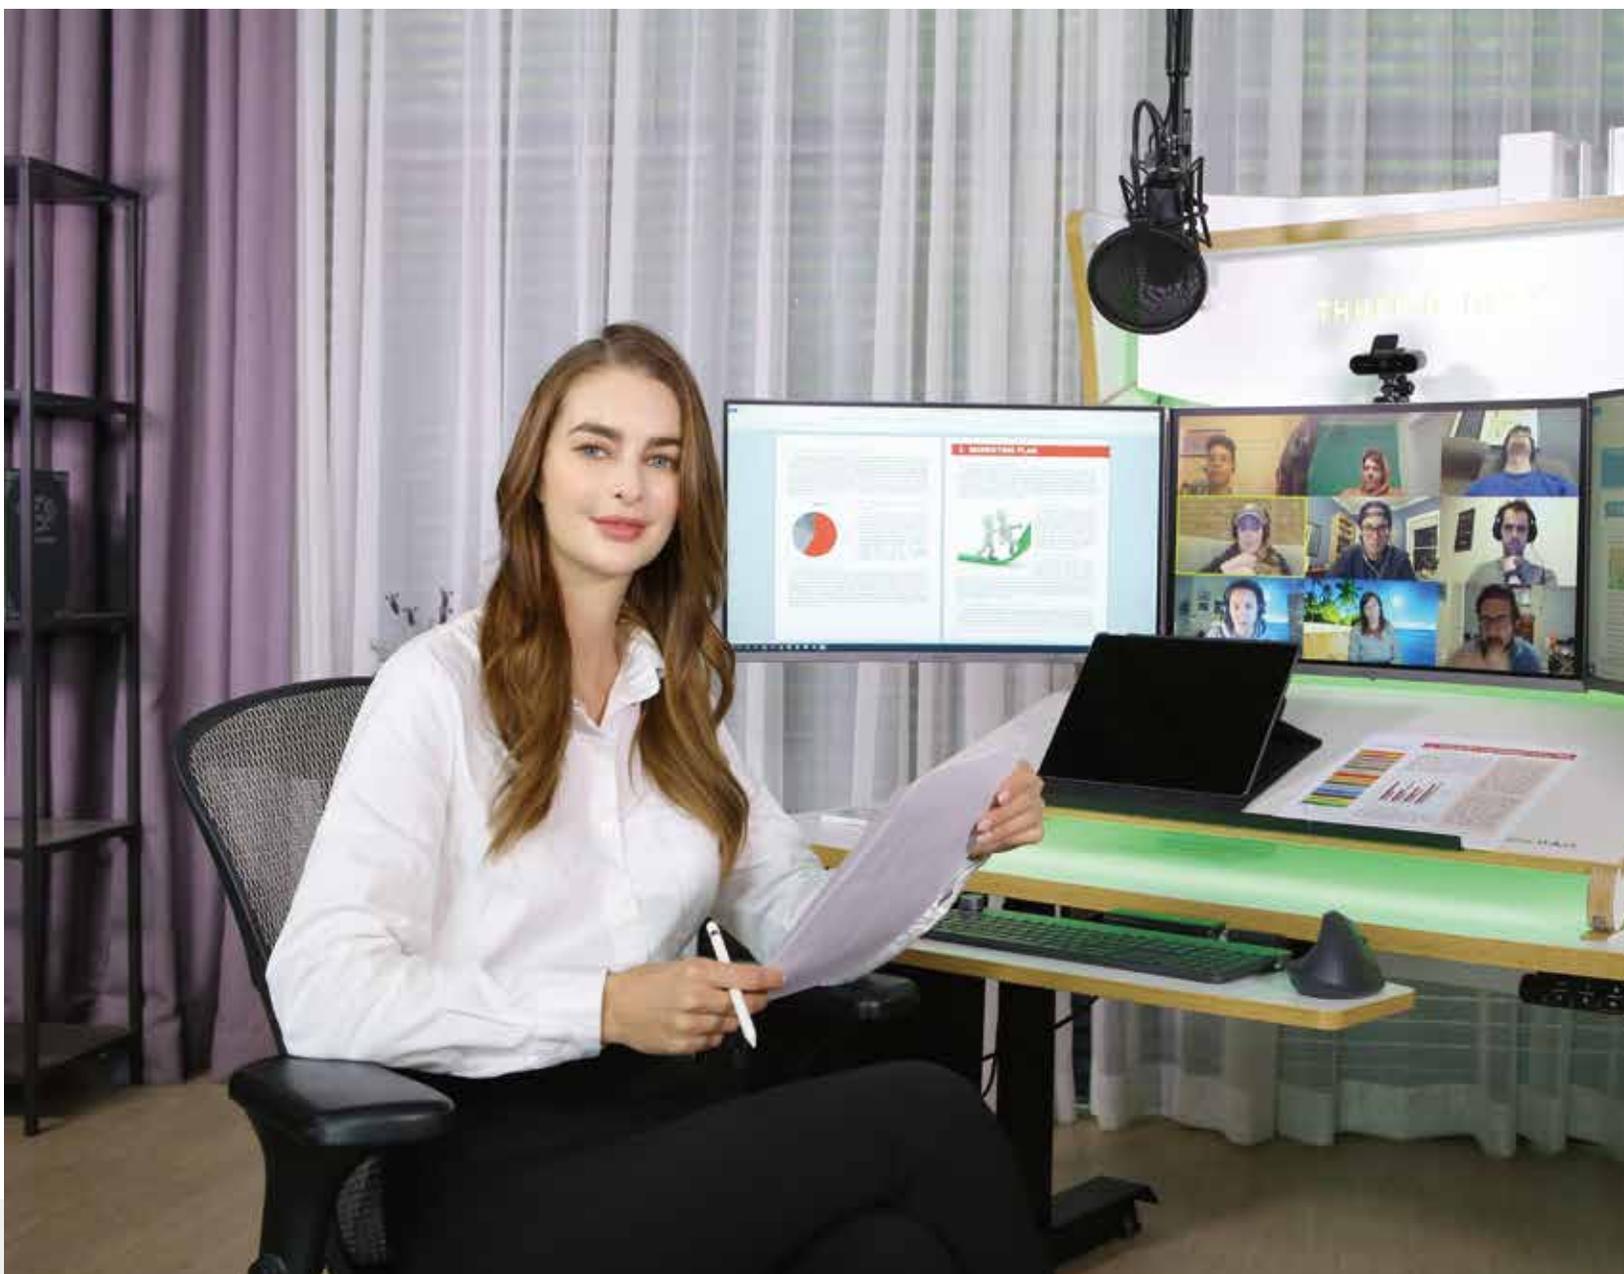

Various furniture for the work environment

Triple Smart Workstation .....	04
Dual Smart Workstation .....	24
Ergonomic Smart Desk .....	36

## PRODUCT OVERVIEW

# TRIPLE SMART WORKSTATION

## A new paradigm in the work environment for professionals

Triple Smart Workstation is a multiscreen electronic workstation organically linking a triple monitor + electronic level adjusting desk + electronic angle adjusting desk + 4K webcam.

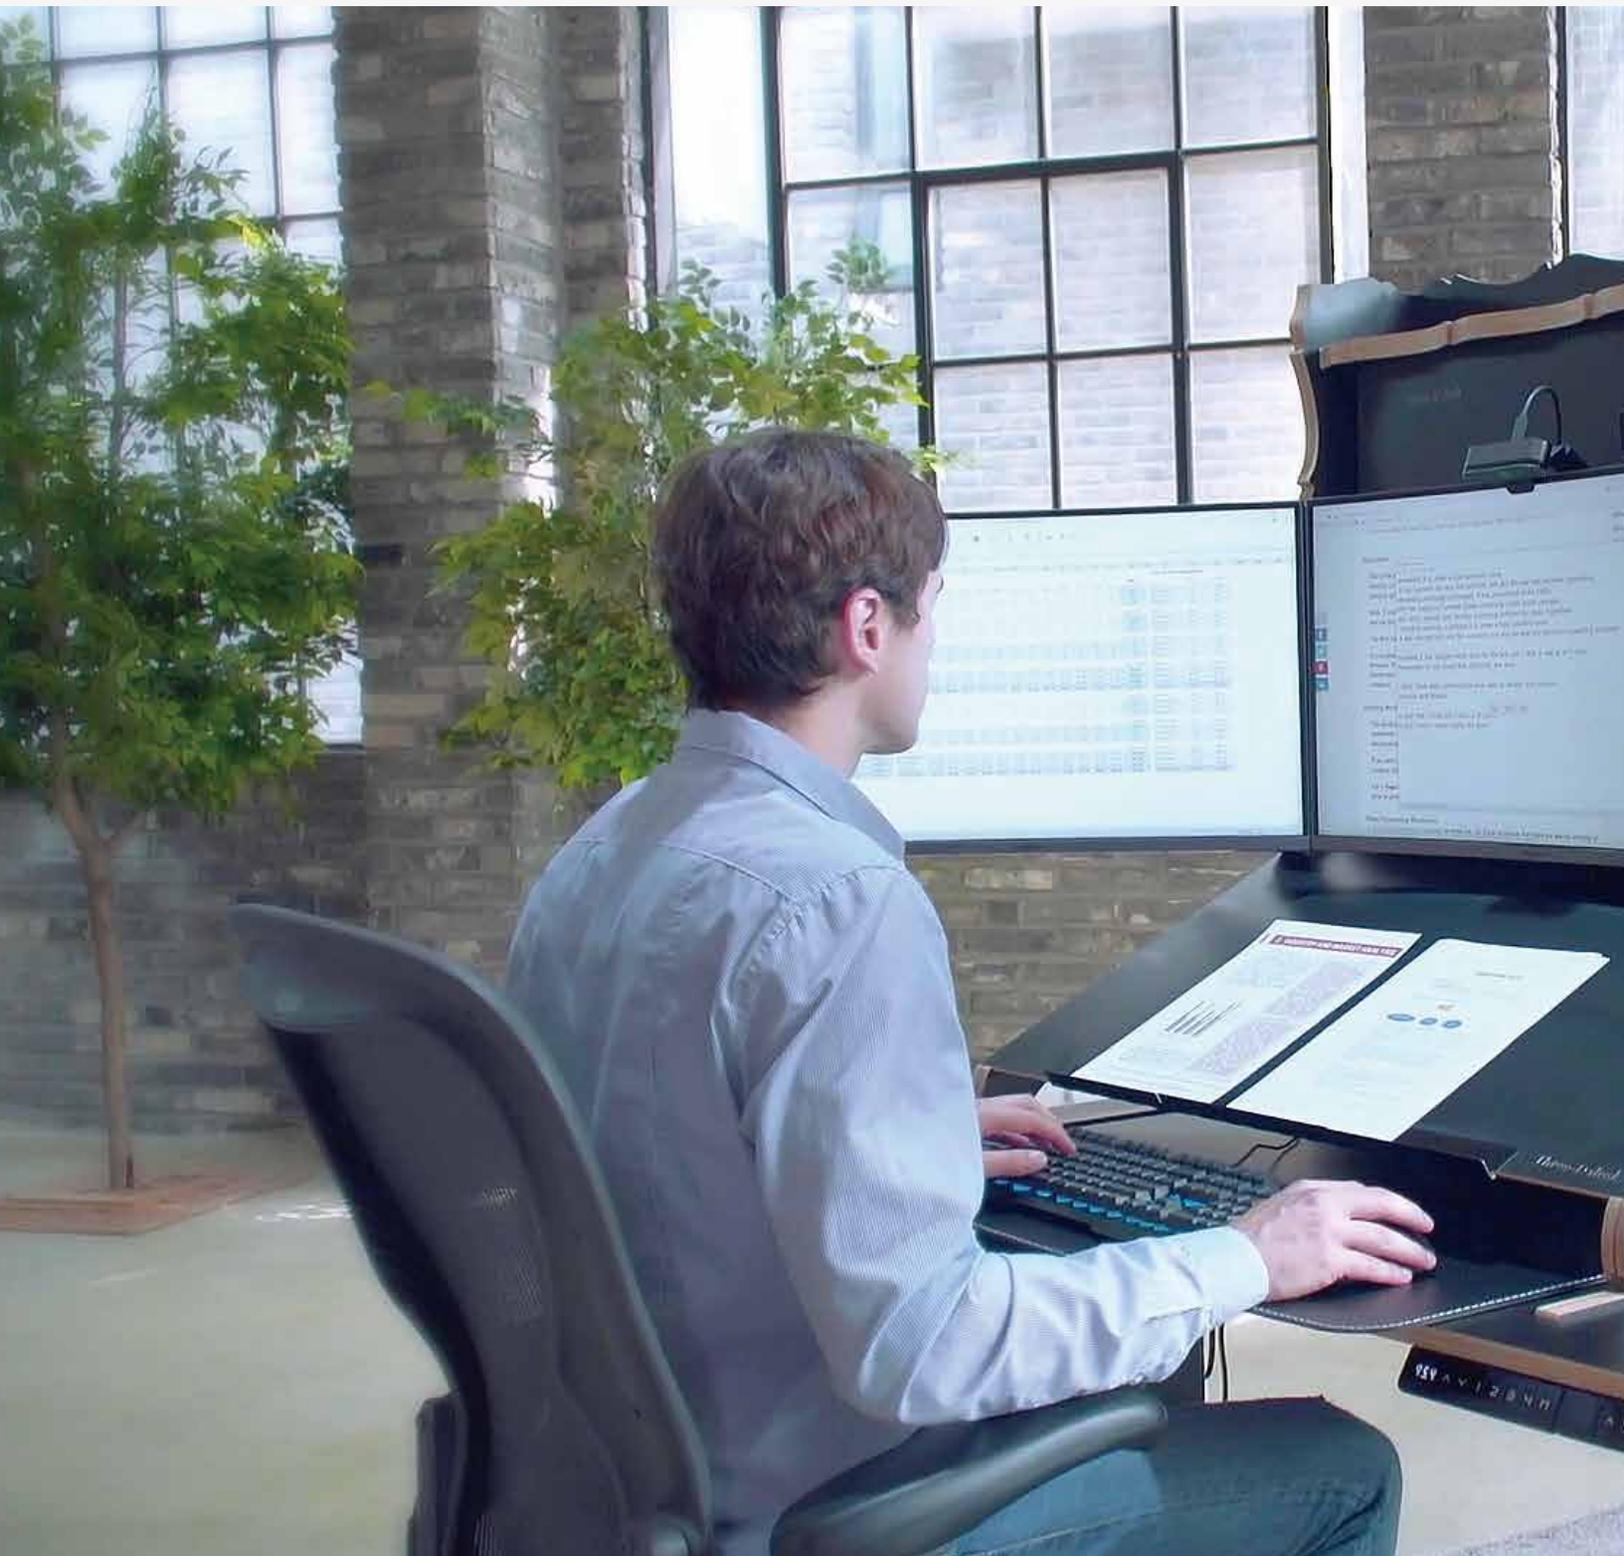

It is for multitasking professionals who use the computer a lot such as doctors, lawyers, stock investors, CEOs, developers, editors, Youtubers, gamers, artists, etc.

In this era of brilliant technology, strangely enough, advances in the work environment, especially that of the desk, were very slow. Desks until now were “dumb desks” that completely ignored the human structure and motion characteristics. Innovatively structured Three-D desk Smart Workstation offers you, who has forcibly adjusted your body to your desk, a new world of work environment!

# Innovative ergonomic design and structural engineering

**A Example 1**  
Use vertical - inclined - horizontal plane

**B Example 2**  
Use of vertical - inclined plane

**Freely adjust your most-used zone.  
Change your work environment in an instant,  
the way you want!**

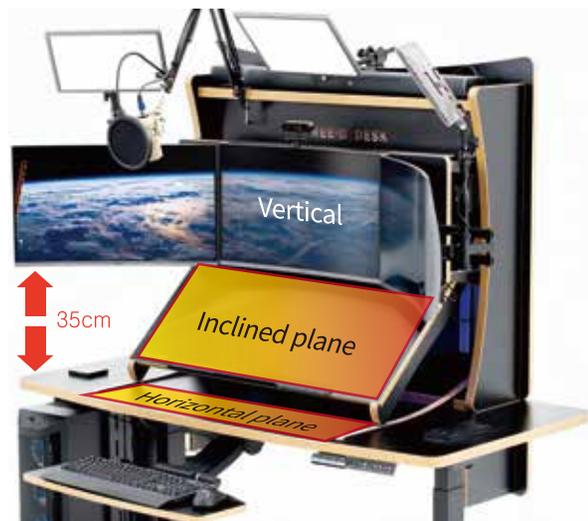

With Three-D desk Workstation, there is no need to tediously adjust the monitor up or down / front or back. With the Three-D desk, when you want the monitor closer to your body for detailed graphic editing or when you want it higher and further to comfortably lean back on the head rest and look at the triple monitor with a wide view during video conferences, internet surfing, and using Word, you can organically adjust the height and distance of the monitor and inclined zone with just one touch of a button.

(The height of the monitor can be adjusted 15~35cm from the surface of the desk, the distance 42~52cm from the front edge of the desk to the user, and the side monitors can each be moved 17cm from the front edge of the desk.)

**C Example 3**  
Use vertical - wide horizontal plane

**D Example 4**  
Use vertical - wide inclined - small horizontal plane

# Starting from ergonomic design Responding to work content and posture change

Despite the fact that desks were inevitable for working and studying modern people, no matter where you looked, there were no comfortable desks that allowed good posture. Until now, the best technology for desks were those with adjustable height and inclinable plate.

Electronic standing desks suitable for working while standing up, became common in major companies such as Google, Facebook and for individuals. The common principle behind standing desks is that when you work standing up, you relieve strain on your neck, shoulder, and back, and improve concentration and blood circulation. Simply working standing up cannot prevent spinal disc for cervical spine disease such as forward head posture, so users of standing desks were still using their desks with a bad posture.

On the other hand, Three-D desks are the only desks in the world that keep your torso in an upright, proper position, structurally engineered to fundamentally prevent spinal disease and cervical disk problems. Also, previous desks were used fixing the monitor to a monitor arm on the surface of the desk, so it was difficult to continuously adjust the monitors. But with Three-D desk, you can move the monitor and incline with one touch of a button and adjust the monitor and various paperwork to your eye-level whenever your position changes. With simple electronic adjustments to the monitor, paperwork, and horizontal surface of the desk to match the user's body, the user can continue their computer work with a proper posture.

## The role of Three-D desk's adjustable height

Three-D desks' adjustable height has a more significant role than just improved blood circulation, which you can get from any other desk with adjustable height. People with a short torso and long legs or vice versa must have both the height of the desk and monitor specified to their bodies' needs for a posture with comfortable neck, shoulder, and back. By simply meeting these two needs with adjustable height and incline functions, Three-D desk makes the world's most comfortable work environment.

## Whether sitting or standing, maintain a good posture

All of Three-D desk's Workstations and desks are the only desks in the world that keep your torso in an upright proper position, structurally engineered to prevent forward head posture. Adjust more than one monitor and the incline zone to eye-level with one button for less fatigue during long work.

## CORE ADVANTAGES

With Three-D desk's unrivaled ergonomic structure plus a triple monitor and various IT device need and smart functions needed for work, Triple Smart Workstation enhances multitasking work efficiency.

### | 3+1 Three-dimensional structure

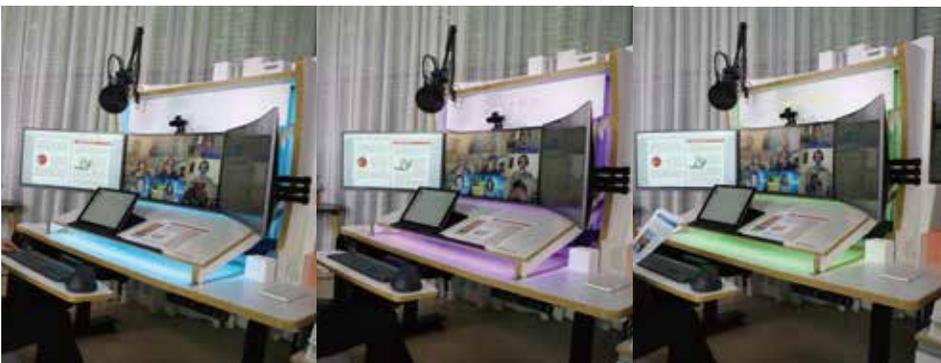

A monitor for computer work, an incline zone for putting paperwork and references, a horizontal surface to put various basic desk objects and supplementary devices on, a keyboard tray that can be adjusted front, back, left, right, so that the user can use the mouse and keyboard at any position. The quintessential desk that includes all these, the Three-D desk Triple Smart Workstation has a ground-breaking structure allowing for larger spatial use of the desk.

The only desk in the world allowing you to see various work screens and various visual materials in one eye and allowing you to type in the most comfortable position! Organically adjust a total of four zones on the desk to customize a comfortable workspace suited for your workstyle.

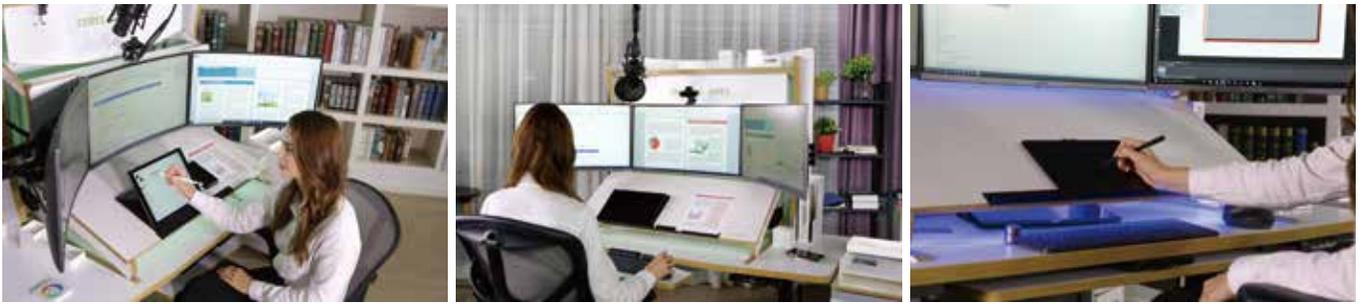

### | Triple Monitor

Do various tasks more professionally and comfortably with three Samsung WQHD 144hz curved 27inch monitors (with a built-in monitor in the center, and adjustable side monitors) The wide triple monitor will upgrade your multitasking skills during work. After years of research and tests, a 27inch monitor was selected after being found to be the most optimal and ergonomically convenient for a triple monitor, and the curved monitor surrounding the user creates the same viewing range. In addition, you can use the automated screen division function built-in each monitor to view up to 12 programs at once. The best workstation that makes work enjoyable, Three-D desk is the leader in popularizing triple monitor work environments.

### | RGB LED

RGB LED backlighting makes your workspace more glamorous and dynamic, boosting your creativity. You can combine the colors you want and fix them in a single color, or you can get a beautiful coloring conversion effect with a three or seven color conversion mode according to your taste.

## ! The core area of Three-D desk, the incline plate

Incline plate: A second desk surface with an adjustable angle to put various paperwork and visual aids on so that they can be seen in one glance with the monitor captivated by its convenience.

The incline plate with an adjustable angle, the core space of Three-D desk, is an essential space for realizing the ideal work environment in which various work objects that need to be seen or handled with such as documents, writing supplies, mobile phones, tablets, laptops, etc. are placed. If necessary, the angle of the inclined plate can be electrically adjusted within the range of 10° to 85° from the horizontal desk surface. Thanks to the incline plate, without bending your head while looking at the monitor, visual materials such as documents can be seen at a glance, and at the same time, typing is very efficient and convenient.

In addition, if you adjust the angle of the inclined plate, the position of the monitor moves along with it, so with a single button, the workspace can be optimized for the structure and motion characteristics of the human body. This one-touch spatial variation configuration function is a simple yet amazing core function and advantage unique to Three-D desk, and those who have experienced it will be captivated by its convenience.

## Expansion of professional work !

Space for broadcasting, music, webtoons... it was very inconvenient to set up various desks needed for professional work one by one. But Triple Smart Workstation stands out in media tasks that require various equipment such as a one person show, recordings, webtoon drawing, and editing. There is already enough space to set broadcasting devices such as lighting, speakers, microphones, DSLR cameras, and audio interface devices for professional one-person broadcasting environments, in the most appropriate location. Not only that, but it is also perfect for adding various professional equipment such as tablet pc, midi-keyboards, and recording equipment, so it can be widely used in various media industries that require computer work.

## Specialized in video work !

Triple Smart Workstation is equipped with a 4K resolution webcam at the top of the middle monitor, which is particularly useful in non-face-to-face tasks such as video conferences, remote lectures, and work at home.

## TRIPLE SMART WORKSTATION

# Premium convenience functions

### 01

#### Ergonomic keyboard tray

SIZE 27.6" × 10.4"

For the best customized keyboard tray system, we applied US brand Humanscale's hardware. You can put the keyboard tray under the desk and pull it out, not only tilting it to the left or right, but also intuitively adjust the height up and down height as necessary. In addition, it can rotate about 15° forward, which is an included function that relieves strain on the wrist during standing typing.

### 02

#### Logitech 4K Camera

SIZE 4.5" × 1.1" × 1.1"

60fps Ultra HD 4K image sensor enables high-resolution professional recording and screen transmission. You can utilize security features with infrared facial recognition, and experience further upgraded video conferencing with HDR, 5x digital zoom, and viewing angle control. In addition, thanks to two omnidirectional built-in microphones with noise removal functions, clear audio transmission is possible without the need to install a separate microphone.

### 03

#### RGB LED Touch panel

SIZE 3.4" × 3.4"

With the touch panel placed on the left of the Workstation, colorful or user customized RGB backlighting can be set up. It includes on/off, 12 color shift mode changes, color combination monochrome mode, brightness control, and flashing speed control functions.

## 04

### Wireless charging / Power strip / USB Charging port

SIZE 3.5" × 7.2"

A wireless phone charger, two-outlet power strip, and two-outlet USB charging port are embedded on the right side of the desk. The power of each charger can be turned on/off, which reduces standby power and does not cause unnecessary heat generation.

## 05

### Desktop Holder

SIZE 7.4" × 15"

The desktop holder is installed at the desk, making it easy to set up a desktop PC. It has a size adjustment and rotation function, so you can conveniently install desktops of various sizes.

(Installable desktop width: 5"-8.3"/ height: 11.2"-20.2")

## 06

### Special low-rise footrest and moving wheel

SIZE 3.7" × 26.6"

The specially designed Three-D desk's low-rise footrest prevents the wheels from causing the height of the desk to rise. In turn, you can freely adjust the height from the lowest to the highest according to your needs. In addition, the high load moving wheel includes a lock function that fixes the wheel in place by rotating a lever.

## 07

### 3 Set DP (or HDMI) Cable

SIZE 118" Cable (EA)

DP or HDMI cable for connection to the 2K/4K triple monitor is installed. Prepare a PC that can connect to the triple monitor and plug it into the DP or HDMI port to easily connect the triple monitor without difficulty in setting the cable.

## 08

### Cable management duct

SIZE 1.8" × 59"

A flexible cable management duct is installed so you can neatly organize the cables needed to connect the main power.

**Installation Case**  
Seongsu, South Korea

**Installation Case**

## PRODUCT OVERVIEW

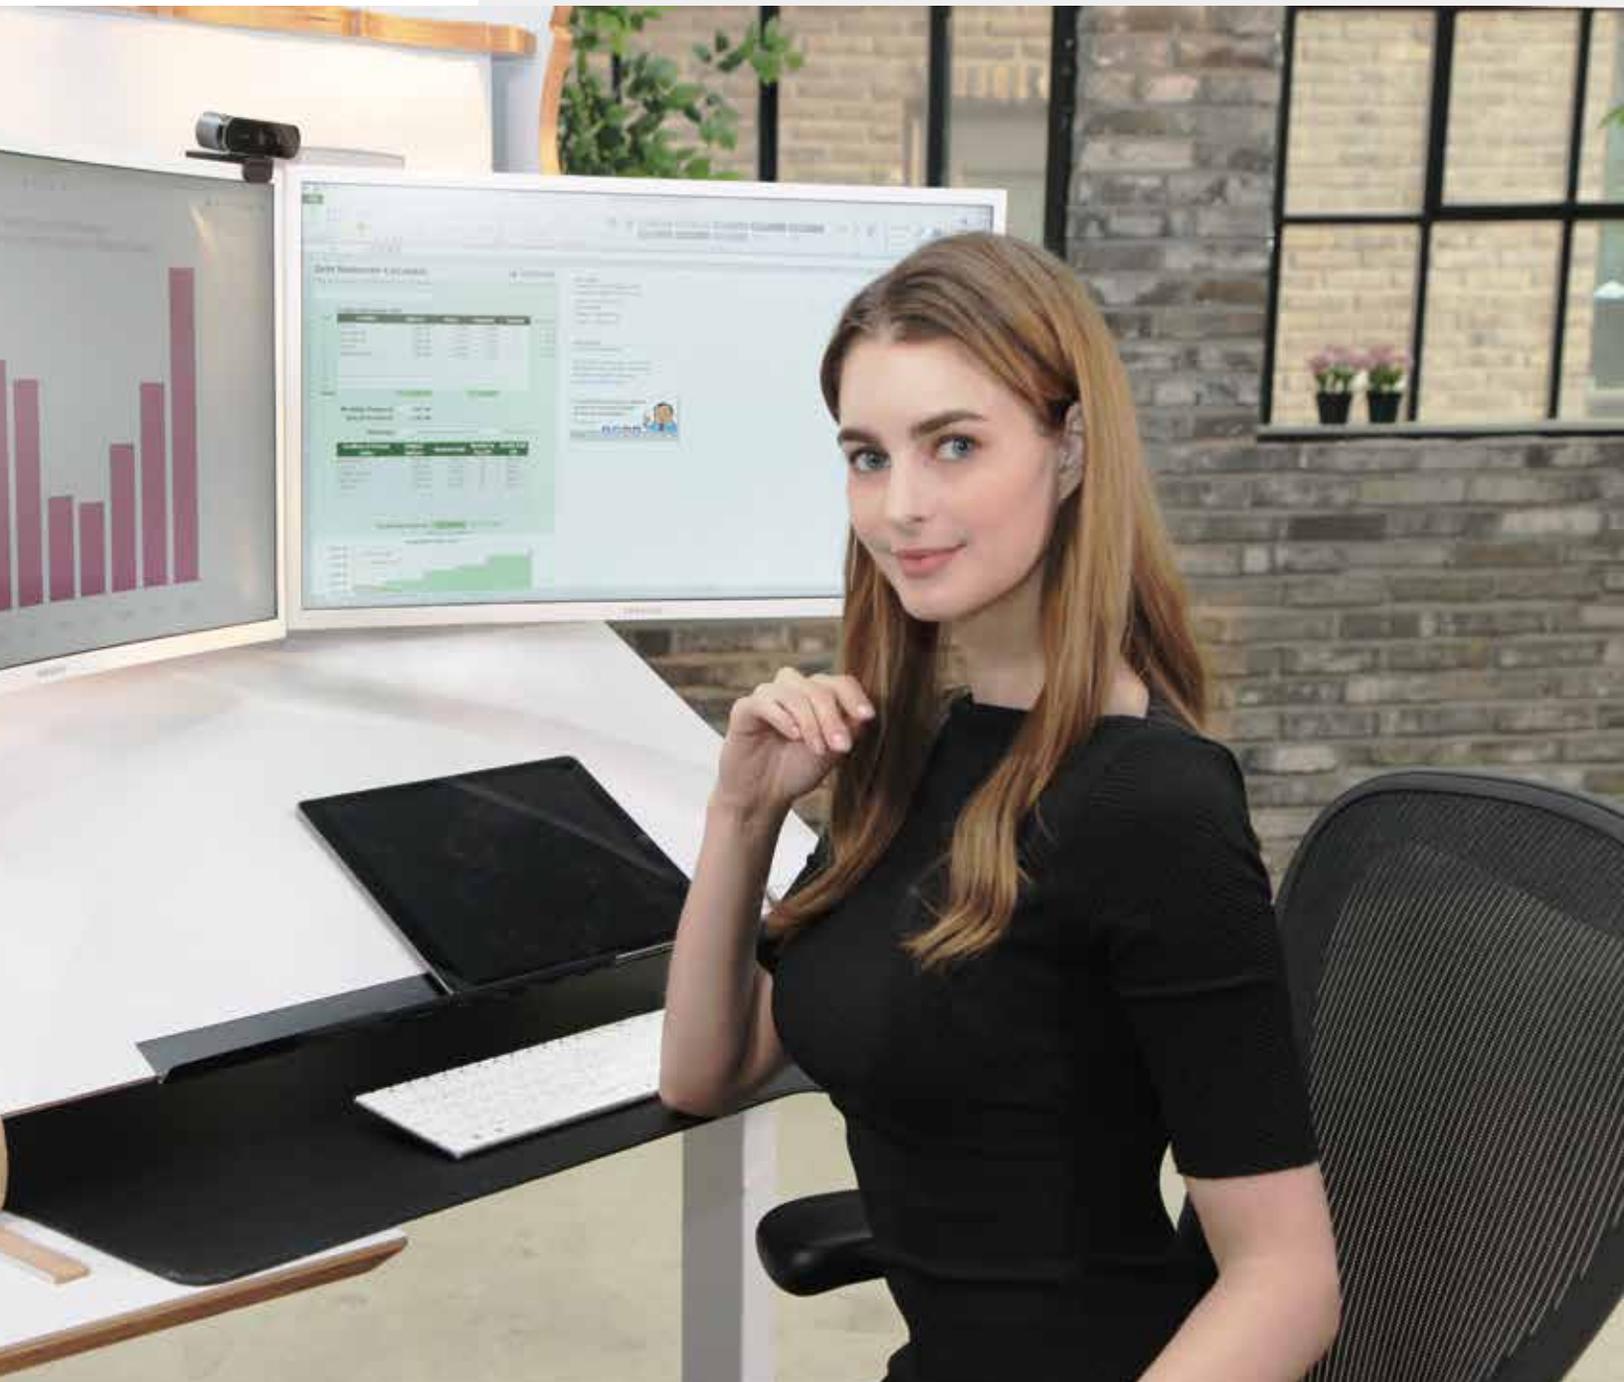

# DUAL SMART WORKSTATION

## Smart hybrid work at home and at work

Dual Smart Workstation is an ergonomic smart electronic workstation that organically combines dual monitor + electronic height adjustment desk + electronic angle adjustment desk.

As working from home, working remotely, working non-face-to-face, and learning from home have become more common due to COVID-19, Three-D desk's Smart Workstations, especially the popular Dual Line, are drawing attention. Dual Smart Workstation is a practical model with essential elements needed for convenient office work and as an advantage, the monitor can be replaced by various sizes.

**Custom-Order W-D270**  
FOR HOME OFFICE

**W-LWD1800 Walnut**  
HOME LIBRARY

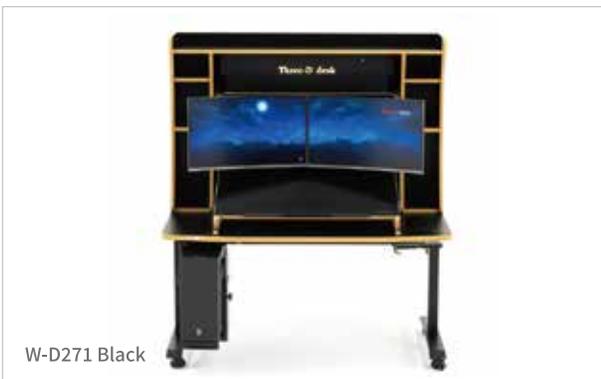

## CORE ADVANTAGES

Dual Smart Workstation boasts the unique ergonomic structure of Three-D Desk and an optimal work environment by adding dual monitors, various IT devices and smart functions.

### Containing the core of Three-D Desk

Containing the structural engineering advantages of Three-D desk it is the world's only ergonomic workstation consisting of a 3 plane horizontal desk-incline angle adjusting desk-monitor desk and with its dual monitor, it is a suitable model for use in general office work, work from home, and Soho offices. It is a model that contains just the core of Three-D desk, allowing maximum work efficiency and space utilization within the limited space of the office.

### Dual monitor

Unlike the Triple Smart Workstation model, it is a general-purpose model that does not require a separate graphic card for your computer. The dual monitor is connected to a retractable and rotatable monitor arm, so you can adjust the position of the monitor as needed. In addition, this model allows you to replace the preinstalled monitor to a monitor with size of your choice.

### Optimized for the office

The W-D270, D271 models combine the workstation and upper bookshelf into one and are economically suitable for setting up in independent spaces in Soho offices or home offices. The W-LD1800 model is designed with free space above the monitor and is suitable for large offices and executive rooms. The W-LWD1800 model has the same shape and composition as the W-LD1800, but it is made of walnut wood to create a luxurious and dignified atmosphere.

### Practical storage space

It is a practical model that can make the most use of the limited workspace with upper bookshelves and shelves on both sides and top of the monitor to organize various documents and supplies needed for office work. You can neatly organize books, documents, and supplies essential to your work without the need to equip an additional bookshelf.

### | Expandability

Additional drawers, desks, cabinets, etc. required for work can be set up as needed, and side motion desks can be added to the left or right to expand desk space if workspace is insufficient. The side motion desk can also be electronically adjusted in height along with the Dual Smart Workstation, maintaining the same height during standing work.

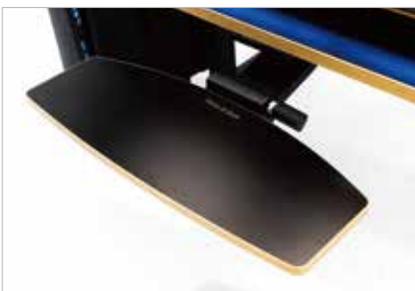

### | Steel memo holder & logo mood light

The center of the upper bookshelf of the W-D271 model contains a steel memo holder plate with the Three-D desk logo imprinted on it. Also, this logo has a warm white lighting that can be dimmed, which serves as a mood lamp. The office-only model (W-LD1800) has a logo or plaque imprint on the back of the Workstation, which can be replaced at the request of consumers.

More convenient office space!

## Changing the unreasonable structure of desks

Changing the unreasonable structure of desks. Humans being upright walking animals, have adapted to the forward-looking body structure for tens of thousands of years. The human body is structured to look at vertical planes, but in today's reality, we mainly look at horizontal planes (desks) and learn. The horizontal desk was very unreasonable for the human body in terms of kinematics, but humans have been forced to adapt it and used it in a bent position. This inconsistency between the structure of the body and the desk is causing various diseases caused by using the desk. As such, the desk surface that the human body wants should be vertical, but this simple concept has faced limitations in technological development, and unreasonable horizontal desks have continued. However, there was no change in the fact that the range of human vision is vertical. Three-D desk has transformed the old concept of desk structure into that of three dimensions. The concept of the main view of the desk was changed from horizontal to vertical. This is the structural innovation of Three-D desk.

## Ergonomic desk for children's proper posture

The habit of children who read and study sitting with their torsos bent at their desks acts as the main culprit of growth disorders and causes body deformation. This accumulation of bad posture causes adults to suffer from a wide range of spinal diseases and cervical diseases. The head especially bends forward using a horizontal desk, causing cervical spine changes due to the load from supporting the heavy head, and this causes chronic diseases such as "forward head posture" and "straight neck" syndrome. Monitors that adults use are set vertical so why are children still reading and studying on a horizontal surface? Imagine how it could feel using a computer if monitors were installed horizontally on the desk. Doesn't just thinking about make your neck hurt?

It is the same for children. They just don't know how uncomfortable it is because they are children. It is the role of adults to help children who start to read maintain a proper posture so that their body does not become damaged. The only real ergonomic desk for proper posture for children, the Three-D desk changes your studying position.

## What is Three-D desk's real proper posture desk?

01

02

01

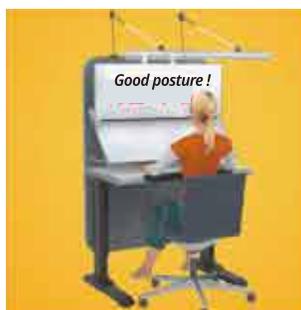

Using a horizontal desk may cause forward head posture. In addition, due to poor oxygen supply to the brain, the head always feels heavy, and the intraocular pressure increases, causing gradual damage to the optic nerve.

02

To use the desk in the proper posture, the visual object must be located in front of the field of view with the head-shoulder-pelvis in a straight line, and the arm must naturally come down from the shoulder and touch the desk surface.

03

04

03 04

The torso of the human body sitting in the chair will keep trying to bend forward because of gravity. The horizontal desk plate is essential because it is a place that supports the elbows to prevent the upper body from bending. Since your eye level is a visual area when in a straight posture, position the work you only see with your eyes. When the elbow is 45 degrees forward and the upper and lower arms are at a 90 degree angle, it is the most comfortable posture for the human body, and while maintaining this posture, you can comfortably rest on the horizontal plate and the inclined plate, and place writing materials or visual aids. Place your elbows on the horizontal plate and your wrists on the incline plate to prevent your back and waist from continuously bending forward.

## The reason existing angle adjustable desks were uncomfortable and convenience of Three-D desk

Angle adjustable desks were made to improve the discomfort of horizontal desks, but why were they so uncomfortable?

All the previous angle adjustable desks claim to have overcome forward head posture, but in fact, there was only a slight improvement, so users still felt uncomfortable. Most of the existing angle adjustable desks simply adjust the angle of the top plate. If you adjust the angle of the plate from elbow height, which comfortably supports the neck and shoulders, to be inclined, the horizontal plate for the elbows supporting the torso disappears, forming a structure in which only the arms and wrists lean against the top plate. The elbow continues to hang midair, putting a considerable load on the shoulder and quickly causing tiredness. And when the horizontal desk plate is inclined, objects such as pencils, erasers, and books roll to the floor due to gravity. Due to these inconveniences, you do not use the incline adjusting function and use the desk like any other ordinary horizontal desk. Finally, for existing angle adjustable desks, it was very difficult to adjust the slope freely and easily, the moment children wanted to use it. It is not easy for children to adjust the height and angle of the desk by themselves because it is heavy and cumbersome. After purchasing the angle adjustable desk, you try adjusting it once or twice in novelty, but before you know it, you see yourself using the desk in horizontal mode, making the angle

But Three-D desk is not the same!

Books can always be in your area of vision at eye level, even if notebooks, workbooks, pencils or erasers are always on the incline plate, there is no need to lower all the items, just push a button to adjust the incline and change to horizontal mode.

The more various activities children do, the more valuable Three-D desk is.

### The convenience functions of ergonomic smart desks

- ★ Built-in upper bookshelf (limited to DS-1200/DS-1400 models)
- ★ 4 colors 5 levels of color conversion of the flexible stand.
- ★ A magnet-attachable memo board at the top of the reading table
- ★ A convenient book holder for holding multiple books
- ★ A foldable three-part notebook stand so that your wrist doesn't get caught when taking Wi notes
- ★ Wireless charger/multitab/USB port (Limited to DS-1400 model)
- ★ Soft mood light with Three-D desk logo (ON/OFF, dimming function)
- ★ Electronic 2 point height adjustment memory/electronic angle adjustment takes into account the safety of inexperienced children.
- ★ A low-speed safety device for height/angle adjustment electronic motor (limited to DS-1200 models)
